LeetCode CodeChef Codeforces HackerRank Certifications

Full-stack software developer with experience building scalable web applications, cloud services, APIs, AI solutions, and workflow automation. Passionate about solving real-world problems through clean, user-centric engineering. Explore my projects and technical work: [Portfolio]

Experience

Bellcorp Studio [Certificate]

Apr 2026 – June 2026

Full stack developer

Remote

- Enhanced warehouse, supplier, and logistics workflow platforms through UI improvements, debugging, API integrations, and deployment support.
- Collaborated with development teams in a real-time production environment, managing GitHub workflows, frontend-backend coordination, and issue resolution across multiple modules.

Amazon [Certificate]

Jun 2025 – Aug 2025

Software Development Engineer Intern

Bangalore, Karnataka

- Built an automated fleet rerouting system for Amazon's CMT Cosmo Batmobile service, eliminating manual AWS region database updates.
- Engineered a Fleet Reroute UI using React, Java backend services & Smithy APIs for multi-fleet config & validation.
- Integrated AWS Lambda, DynamoDB, Chime, Kinesis Firehose, S3, and Athena to automate validation, notifications, auditing, and monitoring of fleet-routing changes.

Education

B V Raju Institute of Technology

Aug 2023 – Apr 2027

B.Tech in Artificial Intelligence and Data Science

(CGPA: 8.97)

Projects

AI Virtual Try-On Fashion Web App (In Progress) | React, Node.js, MongoDB

GitHub

- A fashion e-commerce application enabling users to browse and purchase clothing with responsive, intuitive UI.
- Designed RESTful APIs for product catalog, user interactions, and scalable backend operations.
- Currently integrating overlay-based virtual try-on pipeline and an AI chatbot for personalized outfit recommendations and conversational styling assistant.

SmartApprove Portal | React, Django, Django REST Framework, LangGraph, LLMs

GitHub

- Engineered a full-stack, role-based workflow automation platform handling multi-tier academic document approvals across Tutor, Coordinator, HoD, and Office stages.
- Architected an AI-driven validation pipeline integrating PyMuPDF and LangGraph to parse uploaded PDFs, extracting and verifying text constraints against dynamic templates using Gemini/Groq LLMs.

Voice Spoof Detection | Python, PyTorch, Hugging Face Transformers, Wav2Vec2, ResNet-101

GitHub

- Developed an end-to-end audio deepfake detection system on the ASVspoof 2019 dataset, processing 25K+ speech samples to classify genuine and spoofed audio.
- Implemented and compared ResNet-101 on Mel-spectrograms and Wav2Vec2 on raw waveforms using transfer learning, achieving **0.94 ROC-AUC** and approximately **7% Equal Error Rate (EER)**.

Myntra HackerAmp – Fashion Discovery App | React/React Native

GitHub

- Engineered a swipe-based fashion discovery platform with gesture-based navigation inspired by Gen-Z consumption behavior, reducing decision friction in outfit selection.
- Focused on engagement design by integrating intuitive UX patterns similar to social media platforms.

Technical Skills

Programming Lang: Python, Java, SQL

Databases: supabase - PostgreSQL, MongoDB

AI / ML: TensorFlow, PyTorch, Gen AI

Tools: Pandas, Tableau, Power BI, Make.com ,

Frontend ,Backend : JS, React.js Node.js, APIs

Cloud & DevOps: AWS, EC2, S3, Lambda, Docker, CI/CD

LLM Tools: LangChain, OpenAI APIs, Prompt Engineering

Webhooks , n8n, Git, GitHub, Kaggle, Hugging face

Achievements – Academic, Hackathons & Certifications

- FFE-AFE Scholar for academic excellence & engineering performance; Top 5% finalist in Myntra HackerAmp '24; Prize winner at Yukthi Hackathon; earned Google Cloud Skill Badge in Prompt Design (Vertex AI); AWS Machine Learning Foundation certified ; Exploratory Data Analytics; developed Generative AI applications.
